# REAL ESTATE IN DIGITAL FINANCE

SAMUEL SIMONS

SMITH SCHOOL OF BUSINESS

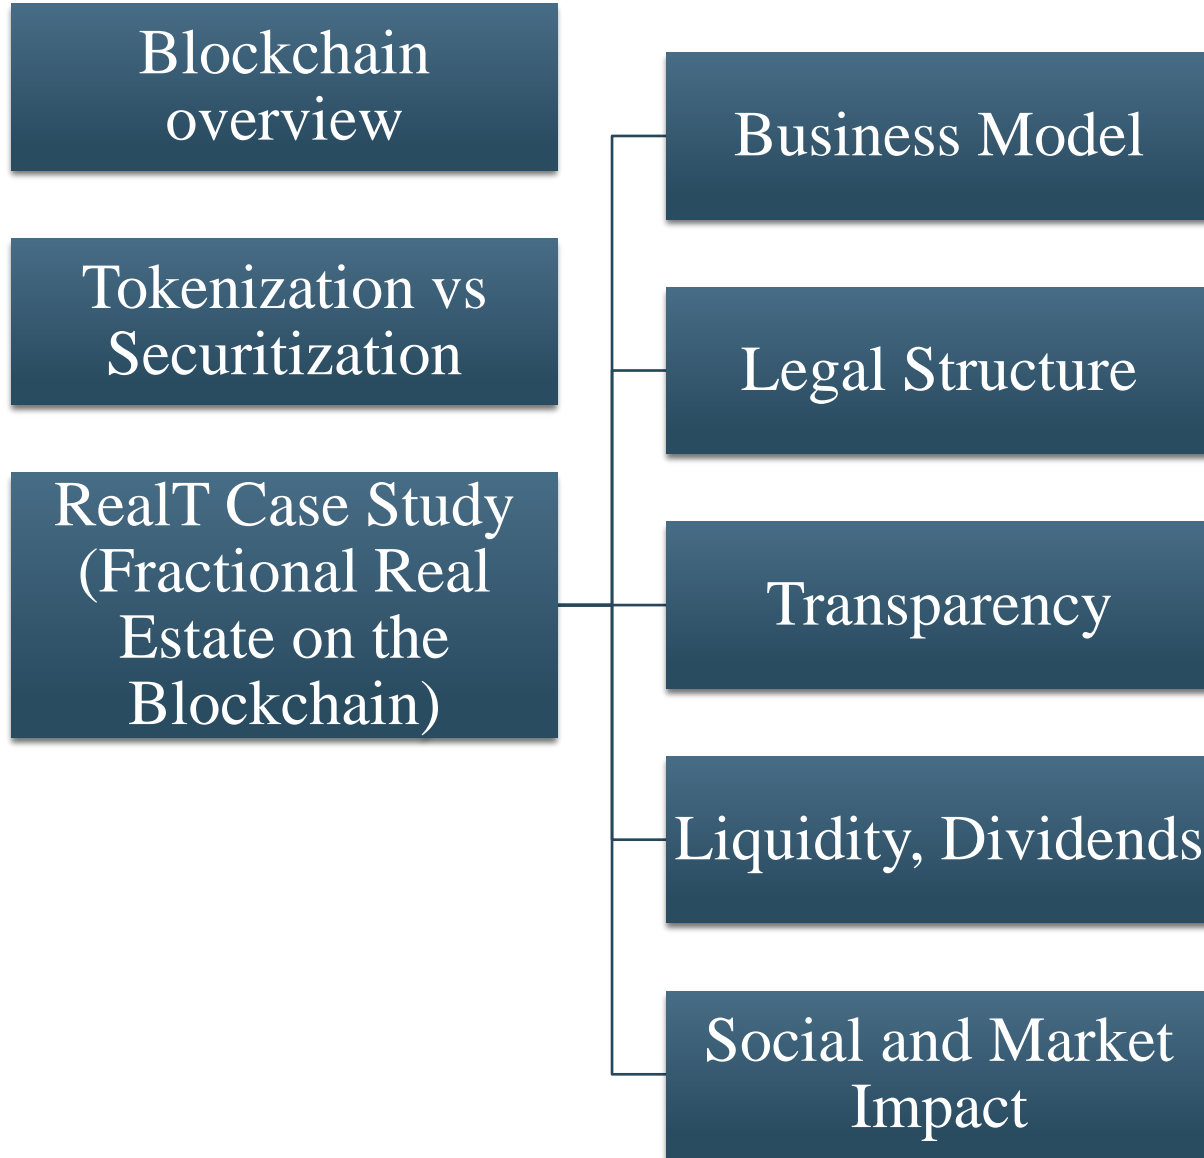

UNIVERSITY OF MARYLAND, COLLEGE PARK

B.S. FINANCE

CLASS OF 2021

# INTRODUCTION

# WHAT IS THE BLOCKCHAIN?

The Blockchain is a set of separate computers that work together to maintain a ledger, or list of transactions.

It can do whatever a regular computer can do, albeit slower, but more secure.

Bitcoin, built on the first blockchain is essentially a numbered bank account, but all transactions are publicly broadcasted.

Ethereum, the largest blockchain, allows for users to send executable code along with transactions.

These are called “Smart Contracts” and allow for programmable money and assets.

Everything that has been sent is irreversible and permanent.

# COMMON MISCONCEPTIONS

- Bitcoin is anonymous
- Bitcoin has no intrinsic value
- Crypto is used to evade taxes
  - For every dollar in Bitcoin laundered, \$800 in American cash is laundered
- Too volatile
  - Have you seen the stock market or forex markets lately? Better derivative markets (options, futures)

# TIMELINE OF BLOCKCHAIN DEVELOPMENT

Bitcoin Created by Pseudonym Satoshi Nakamoto  
Market Cap as of October 2020 is \$211 Billion

2009

Compound.Finance, a money market for digital dollars and cryptocurrencies after a \$25 Million Series A.  
Considered the beginning of Decentralized Finance.

2019

2015

Ethereum co-Founded by Vitalik Buterin  
Allows for a scripting language and executable code on the blockchain.  
“Smart Contracts”

# WHAT IS A SMART CONTRACT?

Also known as a smart property, smart contracts are computer protocols that facilitate, verify, or enforce the negotiation or performance of a contract, or that make a contractual clause unnecessary. Smart contracts often mirror the logic of contractual clauses.

A smart contract is like a cryptographic safe that contains value and unlocks only if specific conditions are met.

# HOW DO THEY WORK?

## Traditional Contracts

Dee wants to sell a product.

Tom wants to buy the product.

## Smart Contracts

Dee wants to sell a product. She identifies herself with her **public key**, sets the terms of the contract, and signs it with her **private key**.

Tom wants to buy the product. He finds Dee's product and signs it with his **private key**, transferring \$ from his address to her **public key**.

A third party is needed to verify the contract and that the terms of the contract have been met. The process can be drawn out, and **Middleman** fees apply as well.

Contracts are binding and enforceable, but have to be executed by human input.

The smart contract is verified by each node on the blockchain network, checking if Dee is the owner of the product, and if Tom has enough money to purchase the product.

If the network agrees that all conditions are true, Tom automatically gets Dee's product. Dee now has Tom's \$ in her account.

## WHAT MAKES SMART CONTRACTS TRUSTWORTHY?

Billy Bandit steals Toms product and claims ownership of it.

Since all transactions are registered on the blockchain, anyone can inspect it. Using the unique ID of the product, we can prove Billy is NOT the owner, and that Tom is.

**BLOCKCHAIN.WTF**

Yo, Fam, That's not yours!

# THE TWO WORLDS OF EMERGING FINANCE

## Traditional Finance

- Singular codebase or clearing house
  - Possible single point for failure
- Backed up by government
- Can handle more transactions
  - Visa can do 50,000 transactions per second
- High start up costs
- Securitization

## Decentralized (Blockchain) Finance

- Censorship resistant
- Can leverage multiple exchanges simultaneously
  - Arbitrage available to all, more efficient markets
- Distributed ledger, harder to fail as a whole
- Inexpensive startup costs
- Divisible, Fractional
- Tokenization

# TRADING, SELLING AND INTERACTING WITH REAL WORLD ASSETS

## Securitization

- Securitization is an act of a centralized exchange placing a real-world asset on their computers and or ledger, so that others may trade within their system
- On a singular exchange, high cost of transfer
- Locked within that platform
- Comes complaint, as exchange does all the work
- Expensive to issue

## Tokenization

- Tokenization is an act from an asset owner placing their asset on a blockchain, so that anyone may interact as they please, from any system or computer
- Provable, “public” ownership
- Move between platforms and contracts
- Many use cases
  - Utility, payment, debt, equity, ownership deed
- Cheap to issue

# TOKENIZATION EXAMPLES

- Digital Dollars
  - \$20 Billion in all stablecoins
  - Backed up by bank accounts, FDIC
- Paxos Gold
  - \$66 Million
- Bond markets
  - Hundreds of millions
  - Could be trillions with additions of muni bonds
- ★ RealT Real Estate
  - Over \$2 Million
  - Divisible shares of rental property

## LIQUIDITY AND DIVIDENDS

- Shareholders can place shares in escrow to be market makers
  - Still receive rental payments
  - Receive profits of bid ask spread
  - Must place both buy side and sell side orders
  - Automated Market Makers
- Dividends are paid without ex-dividend date
  - Those who own at payment time receive payment
  - No weird price swing to calculate expected dividend

# SOCIAL AND MARKET IMPACT

- RealT Statement on why Detroit.
  - “Detroit, one of the fastest growing major cities in America and best kept real estate secrets, is rich with history, and possesses a colorful cultural fabric. Despite being among the 15 largest metro areas in the US, Detroit drivers spend the least amount of time in traffic during peak periods. Beyond automotive innovation, Detroit is home to dozens of startup incubators, and is surging on Inc.’s list of top 50 cities to start a business\*. Root for the Lions, Tigers, Pistons and Red Wings, or enjoy the outdoors with over 200 miles of hiking trails nearby, 9 state parks, and over 3200 miles of coastline to explore. There’s something for everyone here, because Detroit is for everybody.”
- Vast majority of marketplace are Detroit homes.
  - Many are section 8
- Properties are inexpensive; section 8
  - Especially during Covid, section 8 has been a large benefit (consistent payments, government underwriting)
- Buying up real estate with interested capital partners will help redevelop neighborhoods; appreciation to property values

---

## CONCLUSION

- Blockchain Innovation
- Tenants can buy equity
- Long term appreciation value
- Efficient rent Dispersal
- Quality of secondary market, enabling liquidity.
- Ease of use
- Everybody can be an investor
- Private and restricted public equity
